

Oratore: Prof Dan Gibson, Hebrew University of Jerusalem, Israel

Titolo: Approaches to expand the arsenal of anticancer multitargeting Platinum(IV) compounds

Contenuto: An introduction to FDA approved Pt(II) anticancer drugs and their mode of action followed by the development of oral Pt(IV) prodrugs aimed to overcome the drawbacks of the Pt(II) drugs. Will continue with some of our research describing the development of chemistry that facilitates the design and synthesis of novel multi-targeting prodrugs.
